

Integrative Ecology Symposium

Thursday 11 April
9.00 am—4.00 pm

Deakin Downtown
Level 12, Tower 2 Collins Square,
727 Collins Street, Docklands

Integrative Ecology investigates the living environment.

Deakin University's Centre for Integrative Ecology (CIE) combines the study of ecology, evolution, and ecological physiology. This symposium, hosted in collaboration with Deakin University's strategic research centre in Education - Research for Educational Impact (REDI) - showcases CIE researchers who are investigating the mechanisms of immediate and evolutionary response to environmental changes - not just what conditions endanger some species during change.

Each researcher will first speak about their independent research before coming together to form an interactive discussion panel.

Teachers have the option of attending a pre-event briefing and an optional classroom workshop:

9.00 am—10.00 am	optional pre-event briefing (teachers)
10.00 am—1.00 pm	symposium (teachers & non-teachers)
1.00 pm—2.00 pm	lunch break
2.00 pm—4.00 pm	optional classroom workshop (teachers)

Non-teachers may only like to attend from 10.00 am—1.00 pm.
